WHAT IS NEW IN INITIALIZER V1.0.1

Since Initializer v1.0.0

Date: July 4, 2023

To display "What's New" documents for other versions and products, please refer [here](#).

Version 1.0.1 Initial (March 18, 2022)

The following is a list of bugs that were discovered and fixed since the latest, previously released product.

1. Initializer now recognizes diagonal (sticky) wires (#8810).

2. Certificate now displays workgroup ID (#8379).

3. Initializer now reads the port locations correctly from the V5 format (#8909).

4. Initializer now targets .NET Framework 4.8 (#8833).

Version 1.0.1 Update 1 (May 24, 2022)

Added missing PFLite.exe file.

Version 1.0.1 Update 2 (May 25, 2022)

Added support for PSCAD 5.0.1 TLine *.out file format.

Version 1.0.1 Update 3 (June 15, 2022)

Set culture to "en-US".

Version 1.0.1 Update 4 (March 23, 2023)

1. Updated Manifest to support added InstalledBy field, ConfirmInstallDir=False, Prerequisites_TLS, and to ensure certificate licensing is configured.

2. Updated engine to support resolving $(USERNAME) in manifest.

3. Merged all changes to release.

4. Compiled by VS 2022, so it requires the Visual C++ 2022 Redistributables (x86 and (x64).

5. Supports FIPS compliance setting and behaviour.
